SUMMARY

Roblox Game Programmer with 6+ years of experience specializing in Luau, modular scripting, and backend architecture. Proven track record of engineering scalable game loops, optimizing client-server performance, and building secure data systems to deliver cross-platform titles that drive high player engagement and monetization.

EXPERIENCE

Agate

Bandung, Indonesia (Remote)

Roblox Game Developer | *Freelance*

Apr 2026 — Present

- Architected secure backend infrastructures for a Roblox football game, focusing heavily on robust data persistence and session locking.
- Programmed core gameplay loops, multiplayer server-side logic, and seamless player flow to ensure high-concurrency stability.
- Designed and integrated modular systems for player progression, reward mechanics, and in-game economy transactions.
- Enforced clean code architecture and strict technical standards to facilitate long-term, scalable project development.

Sunday Studios

Jakarta, Indonesia (Remote)

Roblox Game Developer | *Part-Time/Contract*

Jul 2025 — Apr 2026

- Engineered scalable backend frameworks (economy systems, mini-games) to support a high-traffic, integrated social hub environment (Pulau Indo).
- Programmed responsive UI/UX components and spearheaded client-side optimizations, reducing memory consumption by 30% to stabilize mobile frame rates.
- Delivered technical implementations that directly contributed to 1M+ visits within the first quarter, sustaining 38K MAU and >10% Day-1 retention.

Lumina Production

Jakarta, Indonesia (Remote)

Roblox Game Developer | *Freelance*

Sep 2024 — Present

- Engineered scalable gameplay systems and event-driven UI across diverse genres (Obbys, narrative horror, roleplay), tailoring client-server logic to distinct game loops.
- Audited and refactored legacy scripts from stalled projects, salvaging core mechanics and optimizing client performance for successful integration.

Topic Indonesia

Jakarta, Indonesia (Remote)

Roblox Game Developer | *Freelance*

Dec 2020 — Nov 2024

- Engineered robust backend systems including AI pathfinding, multiplayer network replication, and time-bound event logic for immersive horror titles (ROHANGAN, The Monox, Living Doll).
 - Programmed responsive frontend UI and client-side mechanics, while standardizing the studio's codebase with reusable modular scripts to optimize development workflows.
-

EDUCATION

Universitas Terbuka

- *Bachelor of Information Systems*
- Current GPA: 3.74/4.00

South Tangerang, Indonesia
2025 — Expected Grad. 2029

SKILLS

- **Programming:** Lua/Luau (Advanced), Python (Intermediate), Java (Basic)
- **Game Engineering:** Modular Scripting, Client-Server Replication, OOP, Code Refactoring, Optimization
- **Backend & Data Systems:** DataStoreService, ProfileService, Server-Side Logic, Economy & Transactions
- **Tools & UI:** Roblox Studio, VS Code, Trello, Notion, Native UI
